Automatic Film Laminating Machine With Flying Knife

High-Speed Glue-Base & Thermal Lamination

A high-speed automatic film laminator built around a servo flying knife. An offset feeder, chrome glue-coating rolls and an electromagnetic + oil-heated drying roll handle both glue-base and thermal lamination at up to 105 m/min — while the ultrasonic-guided flying knife cuts cleanly on the sheet overlap and an automatic stacker collects the run.

Applications

Book & magazine covers · Folding cartons · Luxury packaging · Brochures & catalogues · Paper bags · Premium labels

How it works

01 Auto feed
An offset feeder with pneumatic side-lay registers sheets at up to 15,000 per hour, with non-stop pre-stack feeding.

02 Coat & heat
Double chrome rolls meter glue at 2–3 g/m²; the electromagnetic + oil-heated drying roll dries it evenly at speed.

03 Laminate
A fully pneumatic pressure system bonds the film to the sheet with uniform, easily-adjusted pressure.

04 Flying knife
An ultrasonic-guided servo flying knife cuts cleanly on the sheet overlap, and an automatic stacker collects the run.

Technical specifications

Function	Automatic film lamination · glue-base & thermal
Knife	Servo flying knife · ultrasonic detection
Max sheet size	1080 × 1000 mm
Min sheet size	350 × 350 mm
Max speed	up to 105 m/min
Feeder	Automatic offset · up to 15,000 sheets/h
Overlap accuracy	within 2 mm · servo regulated
Glue coating	Double chrome rolls · 2–3 g/m²
Heating	Electromagnetic + oil · 800 mm drying roll
Pressure system	Fully pneumatic
Control	10" colour touch screen · PLC
Films	PET · BOPP · PVC · CPP · metallized · soft-touch · holographic
Delivery	Automatic stacker · pile up to 1060 mm
Extras	Anti-curl device · corrugated delivery

Indicative figures — exact configuration, sheet size and speed are quoted to your requirement.
