Auto Screen With Industrial Foiler (GST1060)

Inline UV Spot · Cold Foil

A fully automatic stop-cylinder screen line that brings screen UV spot varnish and cold foil stamping into one inline pass. Built on classic stop-cylinder turning technology with offset-grade registration, it runs paper packaging, labels and ceramic & glass decal paper at production speed — single operator, automatic feed to delivery.

Applications

Paper packaging · Folding cartons · Labels · Decal / flowered paper · Ceramic & glass decals · UV spot glazing

How it works

01 Stop-cylinder feed
Sheets are gripped and registered on the stop-cylinder for offset-grade accuracy.

02 Screen coat
The rotary screen lays UV varnish or the cold-foil adhesive exactly where it's wanted.

03 Cold foil transfer
Cold foil is bonded to the coated areas, then lifted away.

04 UV cure & deliver
Inline UV curing locks the finish and sheets are delivered automatically.

Technical specifications

Model	Auto Screen With Industrial Foiler (GST1060)
Functions	Screen UV varnish · Cold foil
Technology	Automatic stop-cylinder
Max sheet size	750 × 1060 mm
Min sheet size	350 × 500 mm
Max printing area	740 × 1050 mm
Substrate thickness	0.1 – 1.0 mm
Max speed	up to 4000 sheets/h
Registration	±0.1 mm
Control	PLC · touch screen
Substrates	Paper · board · decal paper
Operation	Fully automatic · single operator

Indicative figures — exact configuration, sheet size and speed are quoted to your requirement.
